TRAUMA PAUSE: EBP GROUP PROJECT

Melissa Leighty BSN, RN, CEN; Carol Reed BSN, RN, CCRN;
Lance Somerfield BSN, RN, CEN; Dawn Rohrbach BSN, RN, CCRN-K

Purpose

- Enhance nursing knowledge of evidence based practice model via collaboration between hospital units.
- Does a hands-off pause for EMS report during patient arrival improve trauma team efficiency?

Background

- Current approach to St. Patrick Hospital trauma patient arrivals vary in routine, accuracy, and organization, putting patients at risk and resulting in time being lost.

Goals

- Adhere to St. Patrick Hospital trauma team protocol for standardized assembly
- Improve efficiency & accuracy of trauma patient care
- Improve staff satisfaction with trauma team resuscitation

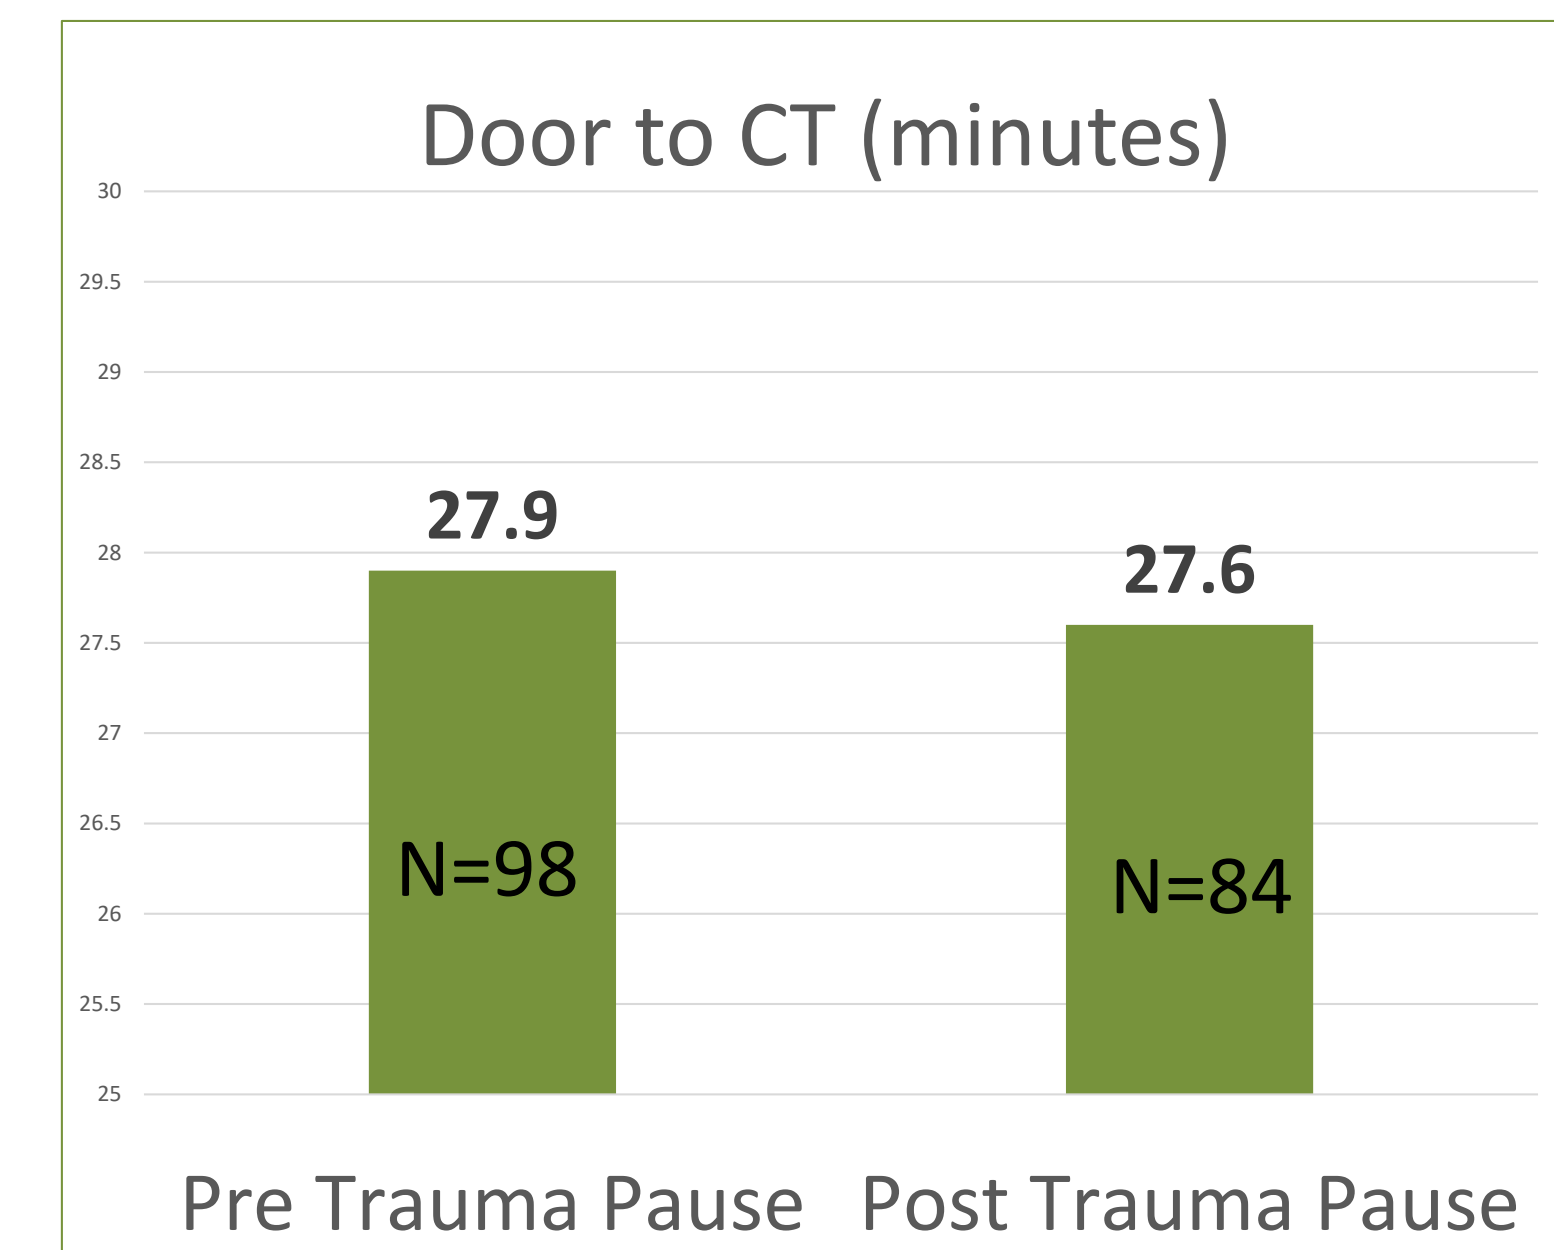

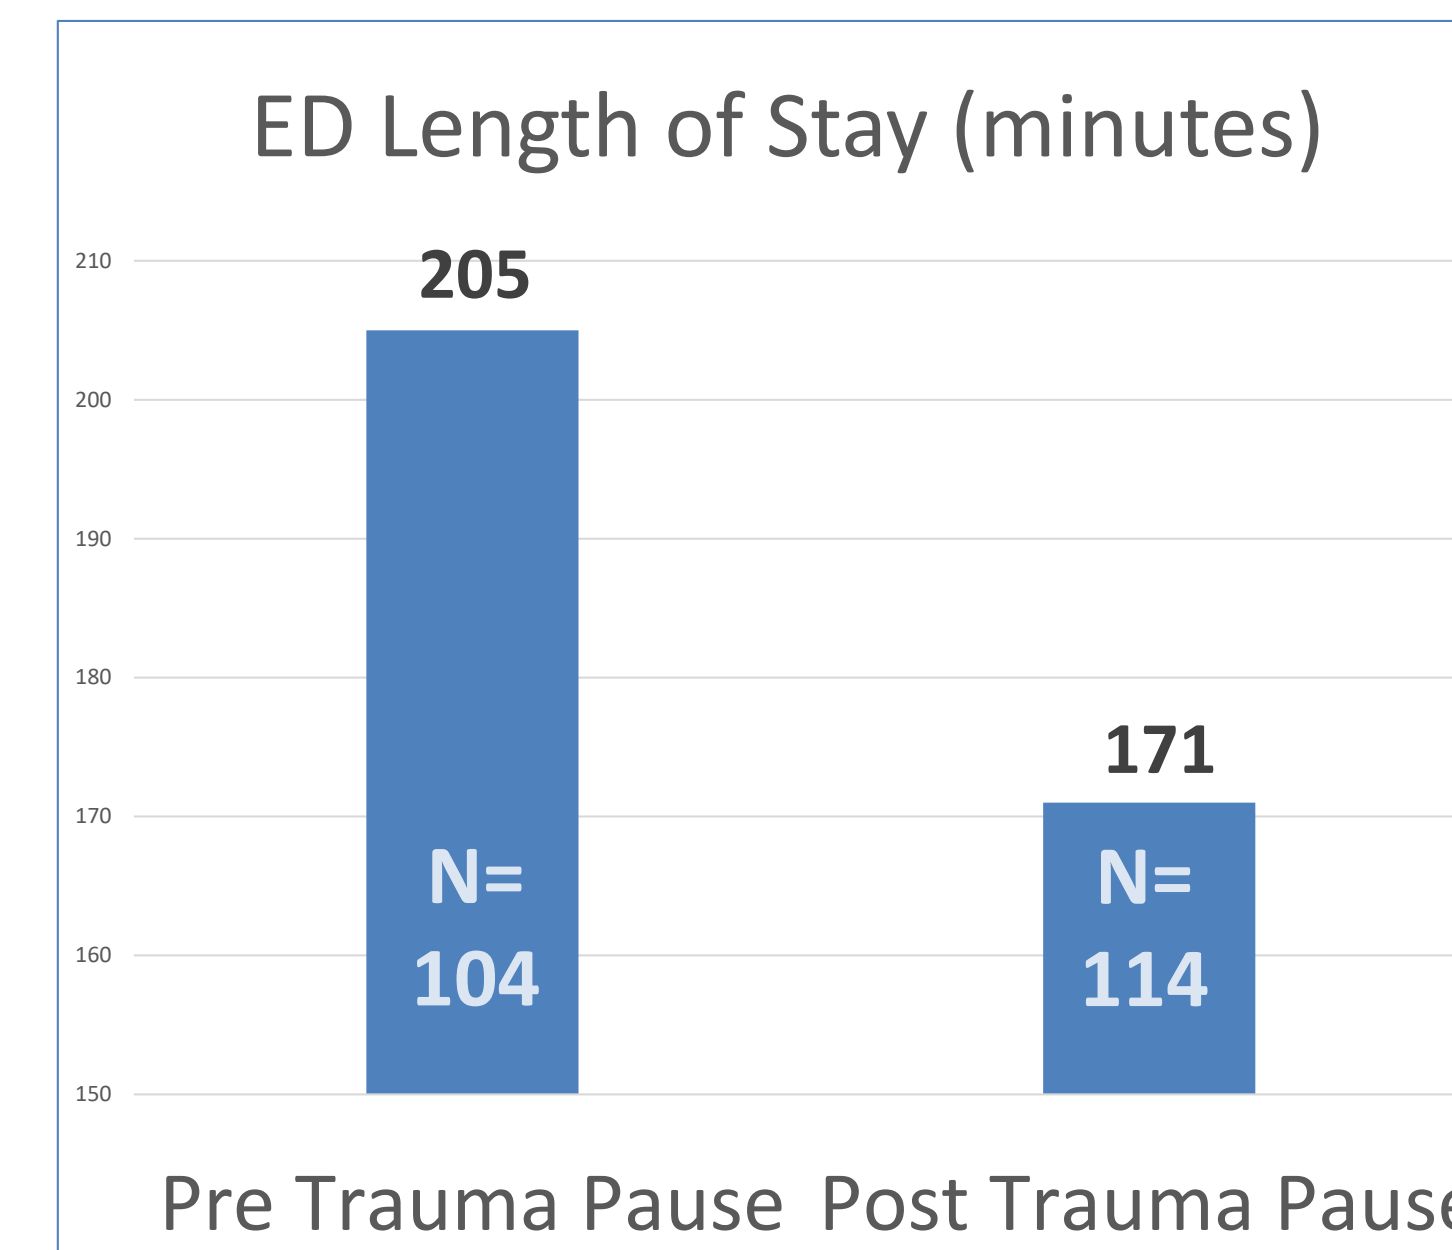

Assessment

- Literature review of emergency medical journals raised concerns about handovers
- Only 72.9% of key prehospital data was documented by a receiving level 1 academic trauma team.
- Poor handover more likely if staff attends to other tasks.
- "Inattention" cited as the primary cause of poor handover
- The Joint Commission reported communication failures resulted in \$1.7 billion in malpractice costs over 5 years

Intervention

- Policy revision to include "Hands Off, Eyes On" pause for 30-60 seconds for EMS report

Evaluation

Next Steps

- Compliance to the Pause
- Physician, surgeon presence on arrival
- Mock trauma scenarios quarterly
- Orienting new hires for sustainability
