Providence St. Joseph Health Digital Commons

The screenshot shows the website's header with the Providence St. Joseph Health logo and the title "Providence St. Joseph Health Digital Commons". A navigation menu includes "Home", "About", "FAQ", and "My Account". A large banner image features a person in a red athletic top with the text "Orthopedic and Sports Medicine Institute". Below the banner is a "Browse Research and Scholarship" section with a "Follow" button and a list of links: "Research unit, institute, or department", "Expert Gallery", and "Nursing – New Knowledge, Innovation, Improvement". A descriptive paragraph states: "The repository is a service of the Providence St. Joseph Health System Library Services. Research and scholarly output included here has been selected and deposited by the System Library Services, the individual departments, and institutes." On the right, a blue sidebar contains "Browse" (with sub-links for Collections, Disciplines, and Authors), "Search" (with a search box and "Search" button), "Advanced Search", "Notify me via email or RSS", and "Author Corner" (with sub-links for Author FAQ and Submit Research). At the bottom, there are sections for "At a Glance" (with "Top 10 Downloads All time" and "Recent Additions 20 most recent additions") and "Paper of the Day" (with the title "A systematic approach to quantifying infection prevention staffing and coverage needs" and authors "Rebecca Bartles, Angela Dickson, et al.").

- Launched in July of 2018

Selected Works of Shu-Ching Chang, PhD, MS

Biostatistician, Medical Data Research Center

Shu-Ching Chang joined Medical Data Research Center as a biostatistician in 2015. She has a broad background in statistics, with specific training and expertise in statistical modeling, optimization, survival, longitudinal data analysis, and extensive experiences on machine learning approaches for high-dimensional genetic association and classification studies. At MDRC, she has been involved in various collaborative projects on cancer research including statistical design of clinical trials, sample size and power analysis, NCDB, SEER and cancer registry database analysis and investigation as well as statistical support and consulting services for oncology. Profile Pages

Original Scope

- 12 initial volunteers
- Request a full CV
- Research existing clinician/researcher profile pages

Challenges

- Some CVs were 150+ pages long
- Often with inaccurate/incomplete citations
- A single profile could take 10+ hours
- Some researches had expectations re: level of detail or updating that were not feasible

Revised Scope

- Researchers are sent an email clearly outlining our scope
- Request:
 - biographical sketch, photo, and research interests
- Import works harvested from DC
- Researchers review for errors
- Researchers may suggest up to 10 additional works
- After initial profile is completed, researchers are invited to “take ownership” to add more detail or update more often

Challenges

- Can be difficult to recruit busy clinicians/researchers
- Ensuring profiles come from a broad spectrum of specialties and locations
- Name disambiguation of harvested works takes time
- Recruiting too many clinicians/researchers!
- What to do if a volunteer doesn't have many works
